

If You Could Prevent Cancer, Would You?

HPV is preventable

HPV or human papillomavirus is passed from person to person during direct skin-to-skin contact, particularly during sexual activity.

6+ HPV IS LINKED WITH MORE THAN 6 TYPES OF CANCER

This vaccine protects against strains **16 and 18**, which are most likely to cause cancer, and **5 additional strains** linked with cancer.*

*Other vaccines may be used outside the US.

The Centers for Disease Control (CDC) recommends HPV vaccination for:

Getting the HPV vaccine could save:

? Men don't need to worry about HPV, right?
Wrong.

HPV affects men and women. In fact, oropharyngeal cancer from HPV is 3 to 5 times more common in men.

The HPV vaccine is a series of 2 or 3 shots.
